

BUILDERS' EDGE

AI × *Crypto.*

Building Your Own Edge in the Market — how builders are using AI to ship faster and gain an advantage in crypto.

PRESENTED BY

Simon Covenant · CCURVES

ONLINE

ccurves.dev

SPEAKER

Simon *Covenant.*

Full-Stack & Blockchain Developer

- × Telegram Bots & Mini Apps
- × DeFi Tools & Trading Bots
- × Smart Contracts & dApps
- × AI-Powered Builder

STACK I BUILD WITH

Next.js · Telegram · Solidity

01 — THE BUILDER STACK HAS CHANGED

The Evolution of Builders

Before

Developers wrote everything manually.

- backend logic
- frontend interfaces
- infrastructure
- debugging

Then Frameworks

Development accelerated.

- Next.js
- Tailwind CSS

Developers started **assembling tools** instead of building everything from scratch.

Now — AI Era

Developers work alongside AI.

- ChatGPT
- GitHub Copilot
- Cursor

02 — CRYPTO MARKETS MOVE FAST

Why This Matters in Crypto

The Noise

Information spreads instantly.

- Twitter
- Telegram groups
- Influencers
- News platforms

This means **information alone is no longer an advantage.**

The Edge

The real edge comes from:

- automation
- faster analysis
- custom tools

They Build

The best traders often build:

- wallet trackers
- token scanners
- arbitrage tools
- copy trading bots

03 — BUILDING TOOLS USED TO BE HARD

AI Removes the Barrier

Before

Developers needed to understand:

- APIs
- backend architecture
- blockchain interaction
- automation systems

Now

AI now helps generate:

- scripts
- dashboards
- integrations
- automation workflows

Result

Builders can **experiment and ship faster** than ever.

04 — LET'S BUILD A SIMPLE CRYPTO TOOL

Live Demo

WHALE WALLET ALERT BOT

Detect when a large wallet buys a token.

WORKFLOW

- Monitor wallet activity
- Detect token swaps
- Send Telegram alerts

BUILT WITH

Node.js · Web3 RPC · Telegram Bot

*AI helps generate the logic in **minutes**.*

05 — DEVELOPERS ARE BECOMING SYSTEM DESIGNERS

What This Means for Builders

Modern builders

- combine AI tools
- automate workflows
- build faster prototypes
- iterate rapidly

One developer can now

- launch products faster
- test multiple ideas
- build powerful market tools

Speed of iteration becomes a **competitive advantage**.

06 — AI + CRYPTO IS JUST GETTING STARTED

The *Future.*

We will likely see:

| AI trading agents

| Autonomous DeFi strategies

| AI-managed DAOs

| Intelligent on-chain automation

SIMON COVENANT · CCURVES

Build your *edge*.
